

MULTIPOINT NANOPROBE AND METHOD FOR FABRICATION**ABSTRACT OF THE DISCLOSURE**

5 A nanoprobe includes a substrate having a layer, which
forms a projected portion. A plurality of conductive lines
is adhered to the projected portion and the lines extend
beyond an end of the projected portion by a distance to
form contact points, wherein the lines are connected to
10 material of the projected portion to provide stiffness and
the contact points provide flexibility during use.
